

Executive Summary

Inadequate governance, accountability and regulatory mechanisms exist to maintain ICE Entertainment. Three issues need attention with regards to data governance, privacy and regulatory and critical technical knowledge. The data maturity score indicates it is in developing stage. This report suggests the formation of a Chief Data Officer and a cross functional data governance committee as a way to formalise data governance. Second, compliant to regulations by discontinuing loyalty program and having a breach response plan in place. Third, settle the metric ownership by formally defining the revenue, margin and active customer in the dimensional model and require it as the single source of truth all over the countries.

WHO OWNS THIS METRIC?

MIS774 Enterprise Data Management | Assessment Task 2 | Client Org. Name here

Who should be accountable for this metric?

WHO TOUCHES THE METRIC	Who should be accountable for this metric?		WHO BREAKS THE METRIC
Operations (Country Managers) Definition used: Sale figures are presented in local currency, no standardised currency used,	Process Owner Role: Finance Controller (Rodney Tim) Responsibility: Responsible for whole reporting process of sales that includes but not limited to FX conversion methodology.	Data Owner Role: Chief Financial Officer Responsibility: Identify the single source of truth, standardise the process and resolve the issues if there is any difference in the actual values and the expected values.	No Formal Agreement Evidence in ICE ENTERTAINMENT case: Finance, Sales, Country Managers
Sales Definition used: Sale across various product categories and regions. Reported to:	System Owner Role: Head of IT (Lionel Fast) Responsibility: Make sure that all the technical operations are properly documented and maintained.	Business Owner Role: CEO (Dhil Rodnut) Responsibility: Make sure all the reports follow the same pattern and all the decisions are being implemented and are being followed.	Root cause type: There is no standardised way amongst 10 countries for representing revenue, margin and active customer Revenue, Margin, and Active Customer.
			Data Quality Failures Evidence in ICE Entertainment case:

Sales Manager (Pearce Noj) and CEO

Marketing and CRM

Definition used:

Customer data related to sales and other sensitive information like address.

Reported to:

Head of Marketing and CRM (Natalie Black) and CEO

Finance

Definition used:

Monthly total revenue generated region wise for every manager and represented in USD.

Reported to:

CEO, board

IT / Analytics Team

Customer data is being accessed through different data sources and is reported to Head of IT

THE METRIC IN DISPUTE

Sales

Agreed definition:

The total revenue that is generated across various regions and across various product categories.

Authorised use:

Uniform and strategic reporting for the sales across all the region.

Source of truth:

Financial forecasting, strategic decision making and Sales performance and reporting

Approved by:

Sales, Finance and Enterprise data governance committee

IT and Analytics Team

Root cause type:

There is duplication of customer data that results in inaccurate report generation.

Pipeline Knowledge Undocumented

Evidence in ICE Entertainment case:

IT Team (Lionel Fast)

Root cause type:

Only two staff member have knowledge in technical aspect and it has not been documented yet.

Shared Access Credentials

Evidence in ICE Entertainment case:

Store Operations Team

Root cause type:

Multiple stores have same login details thus store wise report is not accurate.

Unauthorised Use Of Personal Data

Evidence in ICE Entertainment case:

GOVERNANCE RESPONSE

1. Define

Data standard:

Document that defines how measures based on Sales have been derived, like revenue is sum of sales amount in USD, Margin is difference of sales,

2. Assign

Ownership model:

CFO is data owner, Process owner is looked by Finance controller, Ceo is business owner, head of IT as system owner.

3. Escalate

Issue process:

If there is difference in figures then it must be escalated to Finance Controller within 5 days. It can be further escalated to CFO if unresolved within 10 days.

cost and total count of customer ID at time is active customer.		
---	--	--

Marketing and CRM Team
(Natalie Black)

Root cause type:

Customer data is being used without their proper consent by marketing and CRM team.

**NO OWNER = NO
ACCOUNTABILITY**

Biggest risk at ICE Entertainment

There is no standardised format for Sales and currently no one is assigned who could be accountable.

The Who Owns This Metric analysis shows that there is no common definition of the Sales business process in 10 countries. The derived measures like Revenue, Margin, Active Customer have not been formally documented. The five breaking factors like the lack of a formal agreement between Finance, Sales and Country Managers on the core definitions, data quality issues, the fact that all knowledge around the pipelines is in just two people in IT, shared login credentials to the stores and the fact that the Marketing and country CRM team uses customer data without proper consent(Bharath Kishore Gudepu, 2019) results in no one being accountable.

Data Management Capability and Maturity Assessment

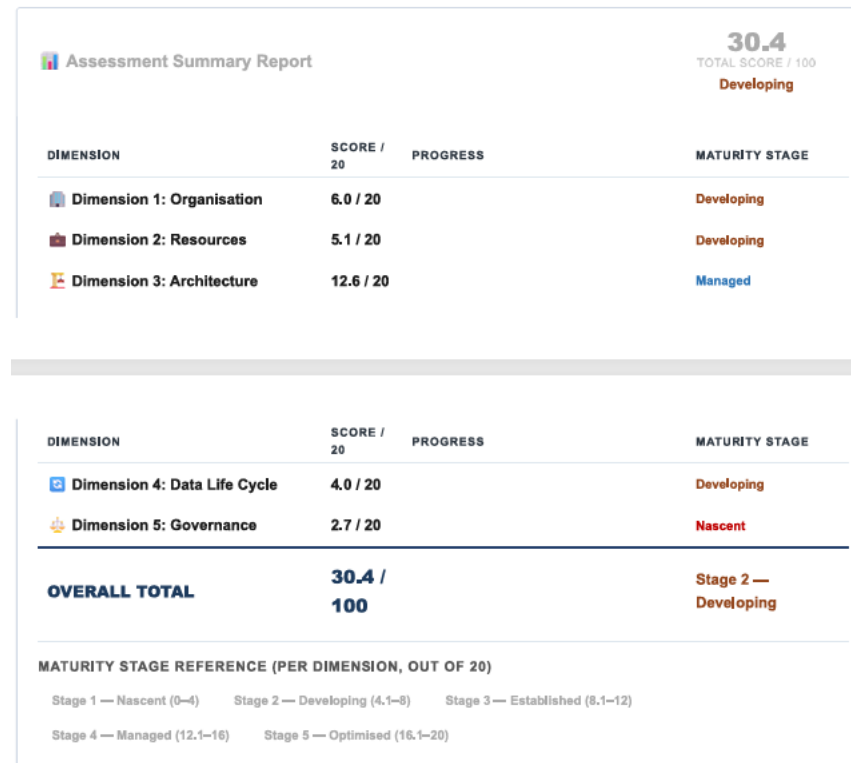

Figure1 : Data Management Capability and Maturity Assessment

The assessment shows a critical imbalance in five dimensions by scoring each dimension out of 20. The system is technically built and is confirmed by the architecture score of 12.6. However, Governance score is at the lowest level of maturity around 2.7. Organisation and Resources score (below 6) indicates that there is an intent for leadership but it has not been expressed in terms of roles, training and accountability (Vitor Hugo Machado Ribeiro et al., 2024). Around the Data Life Cycle score of 4 there are no highlights of the pipeline runs; there is no curation, cataloguing or measurement of value around it. The overall score of 30.4 out of 100 places that show a level of activity in the foundations is not systematic.

Ethics, Security, Privacy and Regulatory Evaluation

DATA ETHICS & PRIVACY ASSESSMENT FRAMEWORK

Organisation: ICE Entertainment Consultant: Parth Prasad Songaonkar Date: 18/05/2026

SECTION A — FIVE Ps ETHICAL DATA ASSESSMENT

For each dimension, identify the specific issue, evidence from the case, risk level, and your recommended action.

Dimension Definition Guiding Question	Assessment + Evidence	Risk Level	Recommended Action
P1 PROVENANCE Where does the data come from? Was it legally acquired with appropriate consent from those who provided it? <i>Guiding question:</i> <i>Was the data collected lawfully and with consent covering all current uses? Does any data come from third parties under arrangements that may not cover current processing?</i>	Assessment: ICE Entertainment gathers customers' information during sales processes and while streaming and through subscription services. None of the customers requested such collection, consolidation and use for profiling their streaming history. There is no contract which enables them to do so. Evidence: Page 5, Point 5.	Risk Level: ☒ HIGH ☐ MEDIUM ☐ LOW	Recommended Action: Review and update the Geo Broadcasting Ltd contract immediately, obligations for sharing information and consent requirements. Perform formal data provenance audit in all ten countries.

P2 PURPOSE Is the data being repurposed? Would the original providers recognise and agree to its current use? <i>Guiding question:</i> Is the data being used for purposes beyond what was communicated at the time of collection? Has the secondary use been disclosed, consented to, or formally authorised?	Assessment: The customer information originally was gathered for transactional use, such as making sales, handling subscriptions and providing entertainment services but now only used for value tiers without their consent. Evidence: Page 1, Paragraph 5.	Risk Level: ☐ HIGH ☒ MEDIUM ☐ LOW	Recommended Action: Immediately suspend the loyalty program data use. Get the board approval for any use of customer behavioral information for secondary purposes.
P3 PROTECTION How is the data protected? Who is responsible for its security, access, retention, and eventual destruction? <i>Guiding question:</i> Are access controls, storage practices, and distribution channels adequate? Is there a	Assessment: ICE Entertainment's overall data protection is very poor in several aspects. It is being shared within teams as attachments and employees are accessing it without proper care.	Risk Level: ☐ HIGH ☒ MEDIUM ☐ LOW	Recommended Action: Adopt formal data classification system and access controls. Implement a documented breach response plan. Establish and adhere to a data retention & deletion policy. Enroll all devices accessing customer data in device management.

<i>documented breach response plan? Is data retained longer than necessary?</i>	Evidence: Page 4, Point 2 and Page 5, Point 3.		
P4 PRIVACY Who has access to identifying data? How are individual records anonymised? Is the privacy notice accurate and current? <i>Guiding question:</i> <i>Is individually identifiable information unnecessarily exposed? Does the organisation's privacy notice accurately describe current data practices, including any third-party sharing?</i>	Assessment: ICE Entertainment exposed individually identifiable customer information. They shared all the data without taking proper permission or consent from the customers. Reports with identifiable customer data are sent as email attachments to 10 nations, where there are no access restrictions. Evidence: Page 5, Point 2.	Risk Level: ☒ HIGH ☐ MEDIUM ☐ LOW	Recommended Action: Update the privacy notice highlighting information such as collecting information about streaming history, behavioral profiling, households deduction and Geo Broadcasting Ltd sharing. Only distribute identifiable customer data via authorized channels.
P5	Assessment: ICE Entertainment has poor data preparation and data quality management due to lack of standardised way of representing	Risk Level:	Recommended Action: Define data quality rules and standards in all data source systems. Converge all the basic metric definitions, such as revenue, margin,

PREPARATION How was data cleaned and prepared? How is accuracy verified? How are inconsistencies and multi-source combinations managed? <i>Guiding question:</i> <i>Is the data accurate, consistently defined, and governed well enough to support the decisions being made from it? Is data lineage documented?</i>	the data and to keep proper track. There is customer duplication as well. Evidence: Page 2, Paragraph 1.	☐ HIGH ☐ MEDIUM ☒ LOW	active customer. Use master data management for market and product category.
---	--	--	---

SECTION B — AUSTRALIAN PRIVACY PRINCIPLES & NDB SCHEME

Identify the privacy principles and obligations most relevant to this case. For each, describe the current state with specific evidence and state the action required.

Relevant APP / Obligation What it requires	Compliance Status	Current State	Action Required
APP / Obligation: APP 1: Open and Transparent Management What does it require? 1. All organisations should have a policy that outlines what personal information they are collecting, how they will use it.	Status: ☐ Compliant ☐ Partial ☒ Non-Compliant	Current State: ICE Entertainment's privacy notice was last updated in 2021 and only covers email, postal contact and nothing about streaming history, behavioural profiling, household composition inference or Geo Broadcasting Ltd.	Action Required: Ensure privacy notice is updated immediately to accurately reflect all current data collection and how it is being used.
APP / Obligation: APP 3: Collection of Solicited Personal Information What does it require?	Status: ☐ Compliant ☒ Partial ☐ Non-Compliant	Current: Basic customer data for transactions is gathered legally. But sensitive data is also being collected without the customers' knowledge or consent.	Action Required Formal privacy impact assessment of the loyalty program needed. Get clear customer consent for behavioural profiling and secondary use of streaming data.

Organisations are not allowed to collect personal information without informing. It must do so in a lawful manner, with the knowledge of the individual.			
APP / Obligation: APP 5: Notification of Collection What does it require? Before the time of collection, organisations must notify individuals of the purposes for which their information is being collected.	Status: ☐ Compliant ☒ Partial ☐ Non-Compliant	Current State: Customers are notified of basic collection through the 2021 privacy notice. However cross border data flows to Melbourne head office from nine other countries have never been formally assessed or disclosed.	Action Required: Update collection notices across all ten countries. Formally assess and document all cross border data flows.

APP / Obligation: APP 11: Security of Personal Information What does it require? Organisations must take reasonable steps to protect personal information from misuse or unauthorised disclosure.	Status: ☐ Compliant ☐ Partial ☒ Non-Compliant	Current State: Multiple simultaneous security failures exist, and the data is not handled properly while sharing or accessing.	Action Required: Implement formal access controls and device management for all devices accessing customer data. Remediate shared point of sale credentials immediately.
APP / Obligation: APP 12: Access to Personal Information What does it require? Organisations must give individuals access to their	Status: ☐ Compliant ☒ Partial ☐ Non-Compliant	Current State: No formal process exists for customers to access or correct their personal information. Even customer data deletion process does not exist.	Action Required: Establish a formal process for handling customer access and correction requests across all ten countries.

personal information on request and must take reasonable steps to correct information that is inaccurate.			
NDB Scheme Notifiable Data Breaches Notify OAIC and affected individuals within 30 days of an eligible data breach likely to cause serious harm.	Status: ☐ Compliant ☐ Partial ☒ Non-Compliant	Current State: No documented breach response plan exists. No incidents have been formally classified as breaches despite multiple high risk situations.	Action Required: Immediately develop and document a formal breach response plan meeting NDB scheme obligations and designated breach response team.

The assessment of the Five P's highlights a HIGH risk in the categories of Provenance and Privacy, and a MEDIUM risk in the categories of Purpose and Protection, and LOW risk in the category of Preparation. The most serious and unethical practice being unauthorized resale of customer information (Tavani & Moor, 2001). Against the Australian Privacy Principles (APP), ICE Entertainment is Non-Compliant with most of the APP, including sharing of personal data without consent, unprofessional handling of data, indefinite data retention and no data breach recovery plan has exposed them to penalties of up to AUD 50 million under the Privacy Act 1988.

Recommendation and End-to-End Strategic Integration

Recommendation 1: Decide Metric Ownership, by defining revenue, margin, and active customers.

Recommendation 2: Document Institutional Knowledge, Cross Train Additional Staff.

Recommendation 3: Develop Data Literacy program in the responsibility of data handling and model adoption (Stoyanovich et al., 2022).

Recommendation 4: All the programs/initiatives that use customer data without proper permission and fail to meet NDB obligations must be stopped.

Recommendation 5: Establish Formal Data Governance (FDO) Formalise data ownership, stewards and custodians of all priority data assets (Wende, n.d.).

The five recommendations are directly linked to ICE Entertainment's strategic priorities. Recommendation 2 and 5 are based on trusted metrics, which allow for sales visibility on a global level. The compliance with privacy allows the loyalty program — Recommendation 4. Quality data and lineage help with procurement accuracy — Recommendations 1 and 2. In doing so, they usher in the second wave of ICE Entertainment's data investment: From competence to governed, trusted and scalable enterprise data management.

Conclusion

ICE Entertainment has proven its ability to create analytics, but not proved to own, defend or maintain it. All these problems point to a single cause that is no one really is accountable. Appointing a Chief Data Officer who has board level stewardship would help to make sure all the policies are followed and proper consent is taken before using the customer data.
